

# Virgin Wood

## Kg. 15

Wood pellets are a high-quality renewable fuel in the form of small cylinders with a diameter of a few millimetres and today represent a valid alternative to traditional heating energy sources. They are obtained from virgin wood and are obtained through simple mechanical operations such as pressing dried sawdust. They are a compact product obtained by exploiting the natural binding capacity of the lignin contained in wood without the addition of additives and foreign chemical substances. They are used in the latest generation stoves as a replacement for wood logs, resulting in a series of ecological, energy and heating system management improvements compared to traditional stoves.

In particular, the pellets supplied by Brunnen Industrie s.r.l. are characterised by low ash residue and high calorific value which places them among the best on the market. Suitable for use on any type of pellet stove, they boast the characteristic of being certified according to the technical regulation ISO 17225-2 at the base of the ENplus® standard, which guarantees their quality and compliance with the requirements.

Encoding	
Trademark	Virgin Wood
Item code	PSVIR15
EAN code	8054726040316
TARIC code	44013100

  

Characteristics	
Certification	ENplus® A1
Diameter	6 ± 1 mm
Length	3.15 ≤ L ≤ 40 mm
Ash	≤ 0,70%
Net calorific value	≥ 4.6 kWh/kg
Notes	The values in the table are the minimum values of the ENplus® ST 1001:2022 standard. Improved characteristics may be indicated on the bag.

Sales unit	
Description	Plastic (LDPE4) bag
Net/gross weight	Kg. 15,000 / Kg. 15,050 ca.

Standard palletizing	
Net/gross weight	Kg. 1260 ca. / Kg. 1294 ca.
Measures (L/W/H)	cm 120 x cm 80 x cm 195 ca.
No. pieces per layer	no. 7 bags
No. layers per pallet	no. 12 layers
No. pieces per pallet	no. 84 bags
Notes	Delivered in container. The indicated data refers to the standard composition and may be subject to modification.
